INFORMATION AND SOFTWARE TECHNOLOGY

Index to Volume 37 (1995)

Number 1 (January) pp 1–64
Number 2 (February) pp 65–128
Number 3 (March) pp 129–192
Number 4 (April) pp 193–256
Number 5–6 (May–June) pp 257–336
Number 7 (July) pp 337–400
Number 8 (August) pp 401–464
Number 9 (September) pp 465–528
Number 10 (October) pp 529–592
Number 11 (November) pp 593–656
Number 12 (December) pp 657–720

Article Index

Number 1

Towards a benchmark for the evaluation of software testing techniques
James Miller, Marc Roper, Murray Wood and Andrew Brooks 5
Object-oriented development for telecommunication services
Panos Fitsilis 15
High-level algebraic Petri nets
Chieh-Ying Kan and Xudong He 23
Photi-a fisheye view of bubbles
Neville Churcher 31
Representation for program control structures by rewriting of flow graphs
Norihide Hattori and Naohiro Ishii 39
A structured specification of an active database system
Jack Campin, Norman W Paton and M Howard Williams 47

Number 2

Recovery of object-oriented design from existing data-intensive business programs
Hee Beng Kuan Tan and Tok Wang Ling 67
Structured method for designing subsystems
Peretz Shoval 79
An optimizing retargetable code generator
M Ancona 87
Debugging multi-agent systems
Marc H Van Liedekerke and Nicholas M Avouris 103
When to prototype: decision variables used in industry
Bill C Hardgrave 113
Evaluation of process tools in systems analysis
Narasimhaiah Gorla, Hao-Che Pu and Walter O Rom 119

Number 3

Query evaluation and optimization in deductive and object-oriented spatial databases
Wei Lu and Jiawei Han 131
Application of clustering techniques to information systems design
Tzvi Raz and Alan T Yaung 145
Object-orientation as structural, functional and behavioural modelling: a comparison of six methods for object-oriented analysis
Juhani Iivari 155
Domain data typing
David Livingstone 165
InterSect_DM: a hypertext data model based on OODBMS
Bing Wang and Peter Hitchcock 177

Number 4

A field study of the relationship of information flow and maintainability of COBOL programs
Michael M Pickard and Bradley D Carter 195
MGA: Rule-based specification of active object-oriented database applications
Peter Sawyer and Ian Sommerville 203
Static analysis of functional programs
K G van den Berg and P M van den Broek 213
A methodology for reverse engineering hierarchical databases
Filippo Tangorra and Domenico Chiarolla 255
Efficient manipulation of a set of fragments
George S Pavlides 233
Architectural requirements for open distributed hypermedia
I Gaviotis and D Christodoulakis 245

Number 5–6

Editorial
Jonathan Bowen and Mike Hinchey 258
Making formal methods education effective for professional software engineers
David Garlan 261
A shallow embedding of Z in HOL
Jonathan Bowen and Mike Gordon 269
Using Z to specify telephone features
Peter Mataga and Pamela Zave 277
Rigorous specification using structured systems analysis and Z
K C Mander and F A C Polack 285
The programming language Z-
Samuel H Valentine 293
Formal development in B Abstract Machine Notation
K Lano and H Haughton 303
Annotated Z bibliography
Jonathan Bowen, Susan Stepney and Rosalind Barden 317
Glossary of Z notation
Jonathan P Bowen 333
Report on Z User Meeting (ZUM '94)
Johathan Bowen and Mike Hinchey 335

Number 7

Presenting dynamically expandable hypermedia
C A Macnee, W Behrendt, J R Kalmus, K G Jeffery amd M D Wilson 339
A conceptual model of cognitive complexity of elements of the programming process
S N Cant, D R Jeffery and B Henderson-Sellers 351
Toward a classification scheme for software process modelling approaches
I R McChesney 363
An algorithm for distributed mutual exclusion
Pranay Chaudhuri 375
A survey of schema versioning issues for database systems
John F Roddick 383

Number 8

Valuation-directed specification of communication systems
Robert Probert, Kassem Saleh and Hua-Long Yu 403

 © 1995 Elsevier Science B.V. All rights reserved

Deriving algebraic Petri net specifications from structured analysis—a case study
Chieh-Ying Kan and Xudong He 411
A path generation method for testing LCSAJs that restrains infeasible paths
N Malevris 435
An approach to the design of object associations
J Ayre, F G Wilkie and J G Hughes 443
Parallelization of hierarchical censored production rules
K K Bharadwaj and R Varshneya 453

Number 9

The use, limitations and customization of structured systems development methods in the United Kingdom
Colin J Hardy, J Barrie Thompson and Helen M Edwards 467
Incremental view maintenance in extended relational databases
John V Harrison 479
An attribute grammar approach to high-level automated hardware synthesis
George Economakos, George Papakonstantinou and Panayotis Tsanakas 493
Multidatabase interoperability in the Jupiter system
John Murphy and Jane Grimson 503
Time-to-completion factors in packaged software development
Erran Carmel 515

Number 10

Selective regression testing-assumptions and fault detecting ability
Hareton K N Leung 531
Type safety and behavioural inheritance
Robert G Clark 539
Implementing Prolog Definite Clause Grammars with SLR(1) parsers on the Relational Alegebra Accelerator
Greg Michaelson 547
Deriving distributed processes from concurrent processes
Padmanabhan Krishnan 557
Relational algebraic framework for the modelling and analysis of Petri nets
Young Chan Kim and Tag Gon Kim 563
Cardinalities in depth: a formal approach to partial validation of conceptual schema
G Grosz and S R Schwer 572
A sofware engineering environment driven by event-condition-action rules and its trigger mechanism
Walcélio L Melo, Noureddine Belkhatir and Jacky Estublier 580

Number 11

Flexibilization of the methodology of system development
Gertjan Vlasblom, Daan Rijsenbrij and Matthijs Glastra 595
Domain object identification through events and functions
Danny C C Poo and Shwu-Yi Lee 609
A survey of current practice in aerospace software development
Robert T Plant and Panagiotis Tsoumpas 623
Transformational data refinement and VDM
D J Andrews and D C Ince 637

Number 12

On the use of dynamic feedback in knowledge base system design
P A Dearnley and D J Smith 659
Deploying realistic estimation (field situation analysis)
Bernard Londeix 665
A case study of a difficult refinement: a fast dictionary for spell-checking program
D J Andrews and D C Ince 671
Evaluating the quality of entity relationship models
Someswar Kesh 681
Supporting production rules using ECA rules in an object-oriented context
Norman W Paton 691
Estimating the quality of functional programs: an empirical investigation
R Harrison, L G Samaraweera, M R Dobie and P H Lewis 701
Time to travel to target cylinders on non-linear discs with two independent seek arms
Ken Deighton 709

Keyword Index

Active database
formal specification, active rules 47
Active databases
objective-oriented databases, rule-based specification 203
production rules, object-oriented databases 691
Active rules
formal specification, active database 47
Active software engineering database
trigger, role concept 580
Adaptive systems
knowledge base management systems, physical design 659
Aerospace software
software process modelling, software practice 623
Algebraic Petri nets
formal methods, structured analysis 411
Analysis
methods, object-oriented 155
Analysis and design methodology
CASE, subsystems 79
Applicative programming
functional programming, executable specification 293
Association
object modelling, object relationship 443
Automated hardware synthesis
high-level synthesis, hardware compilation 493

B AMN
formal development, industrial application of formal methods 303
Behavioural and incremental inheritance
object-oriented development, subtyping 539

Cardinality formalizations
validation, conceptual specification 572
CASE
subsystems, analysis and design methodology 79
structured methods, customization 467
CCS
refinement, concurrency 557
Censored production rules systems
production rules systems, specificities 453
Change management
estimation deployment, Force-Field Analysis 665
Classification
software process, software process modelling 363
Cluster analysis
similarity measure, inclusion measure 145
Code generators
compilers, code optimization 87
Code optimization
code generators, compilers 87
Communications systems
relative clock time, relative concurrency 403
Compilers
code generators, code optimization 87
Complex event detection
view maintenance, update propagation 479
Complexity
measurement, software 351
Computer networks
distributed algorithm, mutual exclusion 375
Conceptual specification
validation, cardinality formalization 572
Concurrency
refinement, CCS 557
Concurrent systems
formal methods, distributed systems 23
Control structure
flow graph, graph rewriting 39
Correct programs
refinement, spell-checker 671
Customization
CASE, structured methods 467

Data flow diagrams
structured English, systems analysis 119
Data model conversion
database design, reverse engineering 225
Data quality
entity relationship modelling, logical database design 681
Data typing
domains, type assignment 165
Database design
reverse engineering, data model conversion 225
DCGs
Prolog, SLR(1) parsing 547
Decision variables
systems development, prototyping 113
Deductive and object-oriented databases
spatial databases, geographical information systems 131
Design recovery
software reuse, software re-engineering 67
Development model
flexible methodology, system development methodology 595
Development of telecommunication services
object-oriented methodologies 15
Diagrams
fish-eye views, information visualization 31
Disc
seek time, performance 709
Distributed algorithm
computer networks, mutual exclusion 375
Distributed architectures
open hypertext, full-text information retrieval 245
Distributed artificial intelligence
distributed computing, multi-agent systems 103
Distributed computing
multi-agent systems, distributed artificial intelligence 103
Distributed systems
formal methods, concurrent systems 23
Domains
type assignment, data typing 165

Entity relationship modelling
logical database design, data quality 681
Estimating quality
functional languages, internal attributes 701
Estimation deployment
Force-Field Analysis, change management 665
Evolving database systems
schema evolution, schema versioning 383
Executable specification
applicative programming, functional programming 293
Experimentation
testing, software quality 5

Fisheye views
diagrams, information visualization 31
Flexible methodology
development model, system development methodology 595
Flow graph
control structure, graph rewriting 39
Force-Field Analysis
estimation deployment, change management 665
Formal development
B AMN, industrial application of formal methods 303
Formal methods
concurrent systems, distributed systems 23
software engineering education, masters programs 261
higher order logic, mechanical verification 269
systems analysis, methods integration 285
algebraic Petri nets, structured analysis 411
Formal models
legacy systems, interoperability 503
Formal specification
active rules, active database 47
Z notation, telephony 277

Fragments
partitioning, heuristic algorithms 233
Full-text information retrieval
distributed architectures, open hypertext 245
Functional languages
internal attributes, estimating quality 701
Functional programming
graph models, software metrics 213
executable specification, applicative programming 293

Geographical information systems
deductive and object-oriented databases, spatial databases 131
Graph models
software metrics, functional programming 213
Graph rewriting
flow graph, control structure 39

Hardware compilation
automated hardware synthesis, high-level synthesis 493
Heuristic algorithms
partitioning, fragments 233
High-level synthesis
automated hardware synthesis, hardware compilation 493
Higher order logic
formal methods, mechanical verification 269
Hybrid system data model
hypertext, object-orientation 177
Hypermedia
intelligent multimedia, knowledge base systems 339
Hypertext
object-orientation, hybrid system data model 177

Inclusion measure
cluster analysis, similarity measure 145
Industrial application of formal method
B AMN, formal development 303
Infeasible paths
software testing, program paths 435
Information flow
software metrics, maintainability 195
Information system specification
object identification, object-oriented domain analysis 609
Information visualization
fisheye views, diagrams 31
Intelligent multimedia
hypermedia, knowledge base systems 339
Internal attributes
functional languages, estimating quality 701
Interoperability
legacy systems, formal models 503

Knowledge base management systems
physical design, adaptive systems 659
Knowledge base systems
hypermedia, intelligent base systems 339

Logical database design
entity relationship modelling, data quality 681
Legacy systems
interoperability, formal models 503

Maintainability
information flow, software metrics 195
Masters programs
formal methods, software engineering education 261
Measurement
complexity, software 351
Mechanical verification
formal methods, higher order logic 269
Methods
analysis, object-oriented 155
Methods integration
formal methods, systems analysis 285
Multi-agent systems
distributed computing, distributed artificial intelligence 103
Mutual exclusion
computer networks, distributed algorithm 375

Object identification
object-oriented domain analysis, information systems specification 609
Object modelling
association, object relationship 443
Object relationship
association, object modelling 443
Object-orientation
hypertext, hybrid system data model 177
Object-oriented
methods, analysis 155
Object-oriented databases
active databases, rule-based specification 203
production rules, active databases 691
Object-oriented development
subtyping, behavioural and incremental inheritance 539
Object-oriented domain analysis
information systems specification, object identification 609
Object-oriented methodologies
development of telecommunication services 15
Open hypertext
full-text information retrieval, distributed architectures 245

Partitioning
fragments, heuristic algorithms 233
Performance
seek time, disc 709
Petri net modelling
relational algebra, systems analysis 563
Physical design
knowledge base management systems, adaptive systems 659
Production rules
object-oriented databases, active databases 691
Production rules systems
censored production rules systems, specificities 453
Program correctness
program development, refinement 637
Program development
program correctness, refinement 637
Program paths
software testing, infeasible paths 435
Prolog
SLR(1) parsing, DCGs 547
Prototyping
systems development, decision variables 113

Refinement
concurrency, CCS 557
program development, program correctness 637
spell-checker, correct programs 671
Regression testing
selective regression testing, software testing 531
Relational algebra
Petri net modelling, systems analysis 563
Relative clock time
communications systems, relative concurrency 403
Relative concurrency
communications systems, relative clock time 403
Reverse engineering
database design, data model conversion 225
Role concept
trigger, active software engineering database 580
Rule-based specification
active databases, object-oriented databases 203

Schema evolution
schema versioning, evolving database systems 383
Schema versioning
schema evolution, evolving database systems 383
Seek time
performance, disc 709
Selective regression testing
regression testing, software testing 531
Similarity measure
inclusion measure, cluster analysis 145
SLR(1) parsing
Prolog, DCGs 547
Software
complexity, measurement 351
Software engineering education
formal methods, masters programs 261
Software metrics
information flow, maintainability 195
graph models, functional programming 213
Software practice
aerospace software, software process modelling 623
Software process
software process modelling, classification 363
Software process modelling
classification, software process 363
software practice, aerospace software 623
Software quality
testing, experimentation 5
Software re-engineering
software reuse, design recovery 67
Software reuse
design recovery, software re-enginering 67
Software testing
infeasible paths, program paths 435
regression testing, selective regression testing 531
Spatial databases
deductive and object-oriented databases, geographical information systems 131
Specificities
production rule systems, censored production rule systems 453
Spell-checker
refinement, correct programs 671
Structured analysis
algebraic Petri nets, formal methods 411
Structured English
data flow diagrams, systems analysis 119

Structured methods
customization, CASE 467
Subsystems
analysis and design methodology, CASE 79
Subtyping
behavioural and incremental inheritance, object-oriented development 539
System development methodology
flexible methodology, development model 595
Systems analysis
data flow diagrams, structured English 119
formal methods, methods integration 285
relational algebra, Petri net modelling 563
Systems development
decision variables, prototyping 113

Team cycle time
time-to-market 515
Telephony
Z notation, formal specification 277
Testing
software quality, experimentation 5
Time-to-market
team cycle time 515
Trigger
active software engineering database, role concept 580
Type assignment
domains, data typing 165

Update propagation
view maintenance, complex event detection 479

Validation
conceptual specification, cardinality formalization 572
View maintenance
complex event detection, update propagation 479

Z notation
telephony, formal specification 277
